

Project Description

Overview: This is a project for a candidate we are considering hiring. The project must meet the following specifications.

Tools:

- Candidate can use any coding tool from the following list: Bolt, Replit, Lovable.

Core Features:

- 1. File Uploader with Summarisation:**
 - Allow users to upload files (doc, docx, pdf, txt).
 - Use an OpenAI model to summarise the content inside the uploaded file.
 - Display the summarised content on the front-end.
- 2. Authentication:**
 - Implement user authentication.
- 3. Backend:**
 - Use Supabase as the backend solution.
- 4. Saving Summaries:**
 - Allow users to save summarised text/files.
 - Saved data should be linked to the user's account.
- 5. Email Sending:**
 - Implement functionality to send emails.
- 6. Profile Picture Upload:**
 - Allow users to upload and update their profile picture.
- 7. Stripe Integration:**
 - Integrate Stripe for payment handling.
 - Free Plan: Users can perform up to 3 free summarisations.
 - Pro Plan: Unlimited summarisations after payment.
 - Ensure that Stripe remains in TEST MODE (use test card number: 4242 4242 4242 4242).
 - Non-logged-in users should not be able to use the service.
- 8. Deliverable Format:**
 - The final deliverable must be in a format that allows for easy testing (e.g., preview URL, project invite, or live URL).
 - The candidate may choose the delivery method, as long as it is testable.

UI Requirements:

- Minimalistic UI is acceptable.
- The focus is on functionality and correct implementation of features and integrations.

Optional Features:

- Deploy the project live.

- Integrate Resend to allow users to send the summarised file to their email directly from their account ('send to email' feature).

Deadline:

- 5 days from the start of the project.
